McKinsey Documents – Spreadsheets

There are more than a thousand spreadsheets in the McKinsey collection, including:

https://idl.ucsf.edu/opioids/docs/#id=nxgf0257

This spreadsheet shows a state-by-state ranking of prescribers of OxyContin and extended-release oxycodone (ERO) from 2011 to 2013. The numbers of total prescriptions are displayed in two groupings: among decile 5-10 prescribers called on and among decile 5-10 prescribers not called on. Data also include the total number of prescribers in this group, the number of prescribers in this group not called on, and percentages not reached.

This spreadsheet focuses on voucher activity for OxyContin prescriptions in May 2018. Several tabs have drop-down options to filter data by label (10-80 MG tablets), National Drug Code number, fill type (new script or refill), voucher prescription status, state, patient status, age range, and more. Data also compare original copays to Express Voucher amounts and new copays.
